

ClaimPilot

From any claim — call, photo, PDF or email — to an auditable file in minutes.

Multi-agent flow with the OpenAI Agents SDK · Track 1: Industry / Business Transformation

Built with Codex

100% synthetic data

THE PROBLEM

First Notice of Loss (FNOL) is slow, manual and inconsistent

26-48 h

until the claim reaches the right adjuster

18%

of cases are reassigned due to inconsistent triage

4-8 h

of manual work per claim (extract, validate, decide)

Every claim arrives by email, form or call, in free format. A handler reads it, extracts the data, looks up the policy, checks coverage and decides the route — by hand, over and over.

THE SOLUTION

Any evidence in — an auditable decision out

Audio call

Photo

PDF / scan

Email / text

Normalized into one claim dossier by an evidence-intake agent — transcription, vision and document parsing.

Intake

Reconciles all evidence into structured JSON

Policy

File search → coverage + verbatim clause citation

Triage

Route, confidence, reasons to approve / decline

Human-in-the-loop

approve · reject · reopen · override

Action agent

payment · adjuster · investigation · decline

Audit trail + outbox

every step logged and exportable

Ask & re-evaluate

Q&A on the file · add data and rerun

6 specialized agents · Guardrail: triage confidence < 0.7 forces human review.

What the judges see in 90 seconds

Drop a call, a photo, a PDF or an email — the agents work live.

Complete case

Scanned form + email → one claim file with the clause quoted verbatim, ready to approve.

Trap case

Incomplete claim → the agent doesn't invent: it drafts and logs an outreach asking for what's missing.

Fraud case

Theft with inconsistencies → investigation route, fraud flags, full audit trail.

AGENT PANEL

● EvidenceIntake – reading...

● IntakeAgent – extracting...

● PolicyAgent – checking...

● TriageAgent – routing...

● Manager – file ready ✓

Reviewer can reopen, re-evaluate, override the route and ask questions.

From hours to minutes, with industry data

FNOL processing time

~~4-8 h~~

< 5 min

manual → with ClaimPilot

McKinsey: up to -50% process time and -25/30% costs in claims.

-62%

process time — real case from a regional insurer

\$2.3M

estimated annual savings in that same case

10-15% → 40-60%

touchless intake (straight-through) in P&C

+23 pts

customer satisfaction (NPS) in the real case

Sources: Helperfy case study · McKinsey · P&C industry benchmarks. Reference figures for the pitch.

The same pattern, many value chains

Healthcare

Prior authorization and appeals (prior auth)

Banking

KYC onboarding and SAR/STR narratives

Logistics

Billing disputes and shipment exceptions

Scale-up plan

Target: mid-market insurers. **Roadmap:** integration with the claims core via MCP, more lines (home, health) and voice input in production.

From hours to minutes.

Every decision, explained, cited and auditable.
